Create A Professional Website In Less 30 Mins...*Regardless of your age, background or experience!*

Let's be honest. Creating websites can be a scary thought.

It is probably the greatest obstacle that stands in the way of people starting an online business. Technical jargon like HTML, SQL, PHP, CSS, FTP make it all sound very complicated.

This book was written specifically for people who are looking to get a great looking website setup, fast and with a minimum of fuss and complications.

It will show you the shortcuts that a lot of professional web designers use in order to produce professional looking websites in a fraction of the time it would usually take.

Who is this book for:

- Business owners looking to build a basic website for their business
- People who want to create their own blog (on their own domain)
- Company owners looking for a simple solution to having an online presence.
- Anyone who wants to build a website for a personal hobby, or club they belong to.
- Anyone who wants to build a content website and make money online.
- And pretty much anyone else looking for a fast, simple way to get a website up and running.

Who is it not for:

- This book is not for you if you are looking for a complicated, in depth explanation of programming or web design.
- This book was specifically designed for beginners, looking for a fast, easy way to get a website up and running.

Learn exactly how to build your online presence step by step, through a detailed and structured process that makes it so easy that anyone can now have a website they can be proud of.

And not only that, but if you are having trouble and need some personal assistance with your site, I am available via email or through my website, & I'm happy to help you with whatever you need.

This book will save you hours of time and frustration, if you simply follow the proven blueprint that I have laid out for you.

Here is just a glimpse of the skills you will have after reading this book:

- Choose & register your domain name (find out exactly what you need to know to choose the right domain name for your particular situation)
- Set up your website hosting (choosing the wrong hosting company can create a lot of headaches down the track. There are certain things that you need to know before you make a decision, and I will show you how to get it discounted as well)
- Configure your domain & web hosting (this is a nightmare if you have never done it before, but I have made this process super easy for you.)
- Install Wordpress on your website (you will be shown a drop dead easy method that literally takes about 30 seconds - and is idiot proof)
- Customize your website's look & feel (To personalise your website you will need to install selected themes and plugins, but unfortunately some of these are full of viruses and malware that can infect your computer - find out which ones are really necessary to have, and are also safe to use)
- Add pages and posts to your website (Posts and pages are not the same thing - discover what the differences are, and how to use them)
- Connect with social media (you will want to do this to increase your traffic and exposure, and to build your own online community)
- Track your website statistics (you will want to know how your site is performing and to keep track of various trends.)
- Protecting your website against hackers (the last thing you need after working really hard to create a great site, is to have a hacker break in and destroy it.)

There is no need to worry if you don't think you have the knowledge or experience. The entire process is laid out for you, step by step and is very easy to follow. And, this includes screenshots and detailed instructions - so you won't ever get lost.

You are now only a few steps away from having access to the website design blueprint that I personally use myself, to build my own sites.

And of course don't forget you can always contact me if you are stuck on anything.
