Handbook of Mathematical Functions With Formulas, Graphs and Mathematical Tables Milton Abramowitz, S/N 003-003-00279-8

2014 Reprint of 1964 Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. Despite the increasing use of computers, the basic need for mathematical tables continues. Tables serve a vital role in preliminary surveys of problems before programming for machine operation, and they are indispensable to thousands of engineers and scientists without access to machines. Because of automatic computers, however, and because of recent scientific advances, a greater variety of functions and a higher accuracy of tabulation than have been available until now are required. In 1954, a conference on mathematical tables, sponsored by M.I.T. and the National Science Foundation, met to discuss a modernization and extension of Jahnke and Emde's classical tables of functions. This volume, published 10 years later by the U.S. Department of Commerce, is the result. Designed to include a maximum of information and to meet the needs of scientists in all fields, it is a monumental piece of work, a comprehensive and self-contained summary of the mathematical functions that arise in physical and engineering problems. The book contains 29 sets of tables, some to as high as 20 places: mathematical constants; physical constants and conversion factors (6 tables); exponential integral and related functions (7); error function and Fresnel integrals (12); Bessel functions of integer (12) and fractional (13) order; integrals of Bessel functions (2); Struve and related functions (2); confluent hypergeometric functions (2); Coulomb wave functions (2); hypergeometric functions; Jacobian elliptic and theta functions (2); elliptic integrals {9}; Weierstrass elliptic and related functions; parabolic cylinder functions {3}; Mathieu functions (2); spheroidal wave functions (5); orthogonal polynomials (13); combinatorial analysis (9); numerical interpolation, differentiation and integration (11); probability functions (11); scales of notation {6}; miscellaneous functions {9}; Laplace transforms (2); and others. Each of these sections is prefaced by a list of related formulas and graphs: differential equations, series expansions, special functions, and other basic relations. These constitute an unusually valuable reference work in themselves. The prefatory material also includes an explanation of the numerical methods involved in using the tables that follow and a bibliography. Numerical examples illustrate the use of each table and explain the computation of function values which lie outside its range, while the editors' introduction describes higher-order interpolation procedures. Well over 100 figures illustrate the text. In all, this is one of the most ambitious and useful books of its type ever published, an essential aid in all scientific and engineering research, problem solving, experimentation and field work. This low-cost edition contains every page of the original government publication. Preface by A. V. Astin. Foreword by Advisory Committee, Conference on Mathematical Tables. Editors' Introduction. Indices to Subjects, Notations.

From reader reviews:

Theodore Huff:

What do you concentrate on book? It is just for students as they are still students or the item for all people in the world, the particular best subject for that? Only you can be answered for that problem above. Every person has various personality and hobby for every other. Don't to be forced someone or something that they don't need do that. You must know how great and also important the book Handbook of Mathematical Functions With Formulas, Graphs and Mathematical Tables. All type of book can you see on many methods. You can look for the internet methods or other social media.

Alva Sexton:

Information is provisions for folks to get better life, information today can get by anyone from everywhere. The information can be a know-how or any news even an issue. What people must be consider if those information which is within the former life are challenging be find than now's taking seriously which one is suitable to believe or which one the actual resource are convinced. If you obtain the unstable resource then you obtain it as your main information there will be huge disadvantage for you. All of those possibilities will not happen throughout you if you take Handbook of Mathematical Functions With Formulas, Graphs and Mathematical Tables as the daily resource information.

Matthew Gregg:

The particular book Handbook of Mathematical Functions With Formulas, Graphs and Mathematical Tables has a lot of knowledge on it. So when you make sure to read this book you can get a lot of benefit. The book was authored by the very famous author. Mcdougal makes some research just before write this book. This kind of book very easy to read you may get the point easily after reading this book.

Hazel Mercado:

The book untitled Handbook of Mathematical Functions With Formulas, Graphs and Mathematical Tables contain a lot of information on the idea. The writer explains your girlfriend idea with easy approach. The language is very straightforward all the people, so do certainly not worry, you can easy to read the idea. The book was authored by famous author. The author gives you in the new era of literary works. You can actually read this book because you can continue reading your smart phone, or product, so you can read the book inside anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site in addition to order it. Have a nice learn.
