Semiconductor Photoelectrochemistry

Yurii Pleskov

Semiconductor Photoelectrochemistry Yurii Pleskov

Interest in semiconductor electrochemistry has expanded rapidly in the past few years spurred on by the search for economic methods for solar energy conversion. Semiconductor electrochemistry and photoelectrochemistry is not, however, restricted to this single area of application. Over the same period there have been many interesting and exciting developments in other areas of semiconductor electrochemistry including the use of laser etching, electroreflectance studies and radiation electro chemistry. All of these areas are among those covered by Pleskov and Gurevich in this book. Their text is a comprehensive study of the electrochemistry and photoelectrochemistry of semiconductors and as such should prove a worthy successor to 'Electrochemistry of Semiconductors' by Myamlin and Pleskov which, since its publication in 1967, has established itself as a standard reference text for workers in this field. In editing the English translation of the present text I have at all times attempted to maintain a clear, concise style while at the same time remaining true to the arguments and ideas of the authors. I hope that I have succeeded in this endeavor and I hope that this book will be welcomed by experts and beginners alike in the expanding area of semiconductor electrochemistry.

From reader reviews:

Marcy Ontiveros:

Have you spare time to get a day? What do you do when you have considerably more or little spare time? Yes, you can choose the suitable activity intended for spend your time. Any person spent all their spare time to take a go walking, shopping, or went to typically the Mall. How about open or maybe read a book entitled Semiconductor Photoelectrochemistry? Maybe it is to become best activity for you. You recognize beside you can spend your time using your favorite's book, you can wiser than before. Do you agree with it is opinion or you have other opinion?

Cindy Gross:

Reading a publication can be one of a lot of exercise that everyone in the world likes. Do you like reading book consequently. There are a lot of reasons why people love it. First reading a e-book will give you a lot of new details. When you read a reserve you will get new information simply because book is one of various ways to share the information or even their idea. Second, reading through a book will make you more imaginative. When you studying a book especially fictional book the author will bring that you imagine the story how the figures do it anything. Third, you are able to share your knowledge to other people. When you read this Semiconductor Photoelectrochemistry, you can tells your family, friends and soon about yours guide. Your knowledge can inspire others, make them reading a guide.

Fred Green:

The book Semiconductor Photoelectrochemistry has a lot of information on it. So when you make sure to read this book you can get a lot of benefit. The book was authored by the very famous author. Mcdougal makes some research previous to write this book. This particular book very easy to read you can get the point easily after reading this article book.

Deborah Hagan:

As a university student exactly feel bored in order to reading. If their teacher inquired them to go to the library in order to make summary for some publication, they are complained. Just very little students that has reading's internal or real their pastime. They just do what the educator want, like asked to the library. They go to generally there but nothing reading very seriously. Any students feel that looking at is not important, boring in addition to can't see colorful images on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this age, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore , this Semiconductor Photoelectrochemistry can make you sense more interested to read.
